Safety Instructions

Read and follow these instructions to ensure safe use of this product. Make sure you keep this guide for future reference. Also, be sure to follow all warnings and instructions marked on the product.

❏ Use only the power cord supplied with the product and do not use the cord with any other equipment. Use of other cords with this product or the use of the supplied power cord with other equipment may result in fire or electric shock.

❏ Be sure your AC power cord meets the relevant local safety standard.

❏ Never disassemble, modify, or attempt to repair the power cord, plug, printer unit, or options by yourself, except as specifically explained in the product's guides.

❏ Unplug the product and refer servicing to qualified service personnel under the following conditions: The power cord or plug is damaged; liquid has entered the product; the product has been dropped or the casing damaged; the product does not operate normally or exhibits a distinct change in performance. Do not adjust controls that are not covered by the operating instructions.

❏ Place the product near a wall outlet where the plug can be easily unplugged.

❏ Do not place or store the product outdoors, near excessive dirt or dust, water, heat sources, or in locations subject to shocks, vibrations, high temperature or humidity.

❏ Take care not to spill liquid on the product and not to handle the product with wet hands.

Product Advisories and Warnings

Read and follow these instructions to avoid damaging the product or your property. Make sure you keep this guide for future reference.

Setting up/using the product

❏ Do not block or cover the vents and openings in the product.

❏ Use only the type of power source indicated on the product's label.

❏ Avoid using outlets on the same circuit as photocopiers or air control systems that regularly switch on and off.

❏ Avoid electrical outlets controlled by wall switches or automatic timers.

❏ Keep the entire computer system away from potential sources of electromagnetic interference, such as loudspeakers or the base units of cordless telephones.

Important Instructions

❏ The power-supply cords should be placed to avoid abrasions, cuts, fraying, crimping, and kinking. Do not place objects on top of the power-supply cords and do not allow the power-supply cords to be stepped on or run over. Be particularly careful to keep all the power-supply cords straight at the ends and the points where they enter and leave the transformer.

❏ If you use an extension cord with the product, make sure that the total ampere rating of the devices plugged into the extension cord does not exceed the cord's ampere rating. Also, make sure that the total ampere rating of all devices plugged into the wall outlet does not exceed the wall outlet's ampere rating.

❏ If you plan to use the product in Germany, the building installation must be protected by a 10 or 16 amp circuit breaker to provide adequate short-circuit protection and over-current protection for the product.

❏ When connecting the product to a computer or other device with a cable, ensure the correct orientation of the connectors. Each connector has only one correct orientation. Inserting a connector in the wrong orientation may damage both devices connected by the cable.

❏ Place the product on a flat, stable surface that extends beyond the base of the product in all directions. If you place the product by the wall, leave more than 10 cm between the back of the product and the wall. The product will not operate properly if it is tilted at an angle.

❏ When storing or transporting the product, avoid tilting it, placing it vertically, or turning it upside down; otherwise ink may leak.

❏ Allow spaces behind the product for the cables, and space above the product so that you can fully raise the printer cover.

❏ Avoid places subject to rapid changes in temperature and humidity. Also, keep the product away from direct sunlight, strong light, or heat sources.

❏ Do not insert objects through the slots in the product.

❏ Do not put your hand inside the product during printing.

❏ Do not touch the white flat cable and ink tubes inside the product.

❏ Do not use aerosol products that contain flammable gases inside or around the product. Doing so may cause fire.

❏ Do not move the print head by hand; otherwise, you may damage the product.

❏ Always turn the product off using the ⏻ button. Do not unplug the product or turn off the power at the outlet until the ⏻ light stops flashing.

❏ Before transporting the product, make sure that the print head is in the home (far right) position.

❏ Do not continue printing when the ink level is below the lower line on the ink tank. Continued use of the product when the ink level is below the lower line could damage the product. Epson recommends filling all ink tanks to the upper line when the product is not operating to reset the ink levels. If the ink tank is filled as specified above, this product provides an alert and stops operating at the estimated time so that the ink levels do not fall below the lower line on the ink tank.

❏ If you are not going to use the product for a long period, be sure to unplug the power cord from the electrical outlet.

Important Instructions

❏ During the life of your product it may be necessary to replace the waste ink pad when it has become full. Whether and how often this is required will vary according to the number of pages you print, the type of material that you print and the number of cleaning cycles that the product performs. Epson Status Monitor, your LCD, or lights on the control panel will advise you when this part needs replacing. The need for replacement of the pad does not mean that your product has ceased to operate in accordance with its specifications. The replacement of this part is a routine product servicing activity within the product's specification and is not a problem which requires repair. The Epson warranty does not therefore cover the cost of this replacement. If your product needs the pad replaced this can be performed for you by any authorised Epson service provider. It is not a user-serviceable part.

Paper Handling

Introduction to Using, Loading, and Storing Media

You can achieve good results with most types of plain paper. However, coated papers provide superior prints because they absorb less ink.

Epson provides special papers that are formulated for the ink used in Epson ink jet products, and recommends these papers to ensure high-quality results.

When loading special paper distributed by Epson, read the instruction sheets packed with the paper first and keep the following points in mind.

> *Note:*
> ❏ *Load the paper into the rear paper feed printable side up. The printable side is usually whiter or glossier. See the instruction sheets packed with the paper for more information. Some types of paper have cut corners to help identify the correct loading direction.*
>
> ❏ *If the paper is curled, flatten it or curl it slightly in the opposite direction before loading. Printing on curled paper may cause ink to smear on your prints.*

Storing paper

Return unused paper to the original package as soon as you finish printing. When handling special media, Epson recommends storing your prints in a resealable plastic bag. Keep unused paper and prints away from high temperature, humidity, and direct sunlight.

Selecting Paper

Refer to the table below for the loading capacities of paper and other media.

Paper type settings from the printer driver

The product automatically adjusts itself for the type of paper you select in your print settings. That is why the paper type setting is so important. It tells your product what kind of paper you are using and adjusts the ink coverage accordingly. The table below lists the settings you should choose for your paper.

Paper Handling

For this paper	Printer driver paper type
Plain paper*	plain papers
Epson Bright White Ink Jet Paper*	plain papers
Epson Premium Glossy Photo Paper*	Epson Premium Glossy
Epson Matte Paper – Heavyweight*	Epson Matte
Epson Photo Quality Ink Jet Paper*	Epson Matte
Envelopes	Envelope

* These paper types are compatible with Exif Print and PRINT Image Matching. For more information, refer to the documentation that came with the Exif Print or PRINT Image Matching compatible digital camera.

Note:
The availability of special media varies by location. For the latest information on media available in your area, contact Epson support.
➡ *"Technical Support Web Site" on page 67*

Loading Paper

Follow these steps to load paper:

1 Slide out the paper support and the output tray and then raise the stopper.
Note:
When using Legal size paper, lower the stopper (*).

2 Slide the edge guide to the left.

3 Fan a stack of paper, then tap it on a flat surface to even the edges.

Paper Handling

4 Load the paper with the printable side up, against the right side of the rear paper feed. The printable side is usually whiter or glossier than the other side.
Note:
Always load paper into the rear paper feed short edge first, even when you are printing landscape-oriented pictures.

5 Slide the edge guide against the left edge of the paper, but not too tightly.
Note:
❏ *Leave enough space in front of the product for the paper to be fully ejected.*

❏ *For plain paper, do not load paper above the ▼ arrow mark inside the edge guide.*
For Epson special media, make sure the number of sheets is less than the limit specified for the media.

➡ *"Selecting Paper" on page 12*

Loading Envelopes

Follow these steps to load envelopes:

Paper Handling
| 1 | Slide out the paper support and the output tray and then raise the stopper. |

| 2 | Slide the edge guide to the left. |

| 3 | Load envelopes short edge first with the flap facing down and to the left. Then slide the edge guide against the left edge of the envelopes, but not too tightly. |
Note:
❏ *The thickness of envelopes and their ability to fold vary widely. If the total thickness of the stack of envelopes exceeds the limit for plain paper, press down on the envelopes to flatten them before loading. If print quality declines when a stack of envelopes is loaded, load one envelope at a time.*

❏ *Do not use envelopes that are curled or folded.*

❏ *Flatten the envelope and the flaps before loading.*
❏ *Flatten the leading edge of the envelope before loading.*

❏ *Avoid using envelopes that are too thin, as they may curl during printing.*

❏ *Align the edges of the envelopes before loading.*

Ink Bottle Safety Instructions, Precautions, and Specifications

Safety instructions

Observe the following when handling the ink:

❏ Keep ink bottles and the ink tank unit out of the reach of children. Do not allow children to drink from or handle the ink bottles and ink bottle cap.

❏ Do not tilt or shake an ink bottle after removing its seal; this can cause leakage.

❏ Be careful not to touch any ink when you handle the ink tanks, ink tank caps, and opened ink bottles or ink bottle caps.
If ink gets on your skin, wash the area thoroughly with soap and water.
If ink gets into your eyes, flush them immediately with water. If discomfort or vision problems continue after a thorough flushing, see a doctor immediately.
If ink gets into your mouth, spit it out immediately and see a doctor right away.

Precautions on refilling ink

Read all of the instructions in this section before refilling ink.

❏ Use ink bottles with the correct part number for this product.
➡ "Ink Bottles" on page 62

❏ Epson recommends the use of genuine Epson ink bottles. Epson cannot guarantee the quality or reliability of non-genuine ink. The use of non-genuine ink may cause damage that is not covered by Epson's warranties, and under certain circumstances, may cause erratic product behavior.

❏ Other products not manufactured by Epson may cause damage that is not covered by Epson's warranties, and under certain circumstances, may cause erratic product behavior.

❏ This product requires careful handling of ink. Ink may splatter when the ink tanks are filled or refilled with ink. If ink gets on your clothes or belongings, it may not come off.

❏ To maintain optimum print head performance, some ink is consumed from all ink tanks not only during printing but also during maintenance operation such as print head cleaning.

❏ Do not open the ink bottle package until you are ready to fill the ink tank. The ink bottle is vacuum packed to maintain its reliability. If you leave an ink bottle unpacked for a long time before using it, normal printing may not be possible.

❏ If the ink level is below the lower line on the ink tank, refill the ink soon. Continued use of the product when the ink level is below the lower line on the tank could damage the product.

❏ Do not continue printing when the ink level is below the lower line on the ink tank. Continued use of the product when the ink level is below the lower line could damage the product. Epson recommends filling all ink tanks to the upper line when the product is not operating to reset the ink levels. If the ink tank is filled as specified above, this product provides an alert and stops operating at the estimated time so that the ink levels do not fall below the lower line on the ink tank.

❏ After bringing an ink bottle inside from a cold storage site, allow it to warm up at room temperature for at least three hours before using it.

❏ Store ink bottles in a cool, dark place.

❏ Store the ink bottles in the same environment as the product. When storing or transporting an ink bottle after removing its seal, do not tilt the bottle and do not subject it to impacts or temperature changes. Otherwise, ink may leak even if the cap on the ink bottle is tightened securely. Be sure to keep the ink bottle upright when tightening the cap, and take measures to prevent ink from leaking when you transport the bottle.

Ink bottle specifications

❏ Epson recommends using the ink bottle before the date printed on the package.

❏ The ink bottles packaged with your product are partly used during initial setup. In order to produce high quality printouts, the print head in your product will be fully charged with ink. This one-off process consumes a quantity of ink and therefore these bottles may print fewer pages compared to subsequent ink bottles.

❏ Quoted yields may vary depending on the images that you are printing, the paper type that you are using, the frequency of your prints and environmental conditions such as temperature.

❏ To ensure you receive premium print quality and to help protect your print head, a variable ink safety reserve remains in the ink tank when your product indicates to refill ink. The yields quoted for you do not include this reserve.

❏ Although the ink bottles may contain recycled materials, this does not affect product function or performance.

❏ When printing in monochrome or grayscale, color inks instead of black ink may be used depending on the paper type or print quality settings. This is because a mixture of color inks is used to create black.

Checking the Ink Levels

To confirm the actual ink remaining, visually check the ink levels in the product's ink tanks.

> *Important:*
> *If the ink level is below the lower line on the ink tank, fill it to the upper line on the ink tank. Continued use of the product when the ink level is below the lower line on the tank could damage the product.*

Refilling the Ink Tanks

> *Note:*
> *The illustrations show how to refill the black ink. However, the instructions are the same for all of the inks.*

Note:
If any ink remains in the ink bottle after filling the ink tank up to the upper line, install the cap securely and store the ink bottle upright for later use.

> **Important:**
> Do not turn off the product during head cleaning. If the head cleaning is incomplete, you may not be able to print.

> ❏ Use the Nozzle Check utility first to confirm that the print head needs to be cleaned. This saves ink.
> ❏ When ink is low you may not be able to clean the print head. Prepare a new ink bottle.

Troubleshooting product problems is best handled in two steps: first diagnose the problem, then apply likely solutions until the problem is fixed.

The information that you need to diagnose and solve most common problems is provided by online problem solving, the control panel, or the status monitor. Refer to the appropriate section below.

If you have a specific problem relating to print quality, a printing problem not related to print quality, or a paper feeding problem, or if the product does not print at all, refer to the appropriate section.

To solve a problem, you may need to cancel printing.

Checking product status

If a problem occurs while printing, an error message will appear in the status monitor window.

If an error message appears indicating the product's ink pads are nearing the end of their service life, contact Epson support to replace them. ❏ Remove each sheet from the output tray as it is printed.

❏ Do not touch or allow anything to come into contact with the printed side of paper with a shiny finish. To handle your prints, follow the instructions of the paper.

❏ Run the Head Cleaning utility to clear any clogged ink nozzles.
➡ "Cleaning the Print Head" on page 37

❏ Run the Print Head Alignment utility.
➡ "Aligning the Print Head" on page 38

❏ If the paper is smeared with ink after printing, clean the interior of the product.

Printing is too slow

❏ Make sure the paper type selected in the printer driver is appropriate for the type of paper loaded in the product.
→ "Paper type settings from the printer driver" on page 13

❏ For Windows, choose a lower **Quality** in the printer driver Main window.
For Mac OS X, choose a lower Print Quality in the Print Settings dialog box from your printer driver's Print dialog box.
→ "Accessing the printer driver for Windows" on page 17
→ "Accessing the printer driver for Mac OS X" on page 18

❏ Close any unnecessary applications.

❏ If you print continuously for an extended period, the printing may be extremely slow. This is to slow down the printing speed and prevent the product mechanism from overheating and being damaged. If this happens, you can continue to print, but we recommend stopping and leaving the product idle for at least 30 minutes with the power on. (The product does not recover with the power off.) After you restart, the product will print at normal speed.

❏ Uninstall the printer driver, then reinstall it.
→ "Uninstalling Your Software" on page 46

If you try all of the methods above and cannot solve the problem, see the following:
→ "Increasing the Print Speed (For Windows Only)" on page 59

Paper Does Not Feed Correctly

Paper does not feed

Remove the stack of paper and make sure of the following:

❏ The paper is not curled or creased.

❏ The paper is not too old. See the instructions that came with the paper for more information.

❏ For plain paper, do not load paper above the line just under the ▼ arrow mark inside the edge guide.
For Epson special media, make sure the number of sheets is less than the limit specified for the media.
→ "Selecting Paper" on page 12

❏ Paper is not jammed inside the product. If it is, remove the jammed paper.
→ "Paper Jams" on page 51

❏ You have followed any special loading instructions that came with your paper.

❏ The paper does not have any binder holes.

Multiple pages feed

❑ For plain paper, do not load paper above the line just under the ▼ arrow mark inside the edge guide.
For Epson special media, make sure the number of sheets is less than the limit specified for the media.
➡ "Selecting Paper" on page 12

❑ Make sure the edge guide is snug against the left edge of the paper.

❑ Make sure the paper is not curled or folded. If so, flatten it or curl it slightly toward the opposite side before loading.

❑ Remove the stack of paper and make sure that the paper is not too thin.
➡ "Paper" on page 63

❑ Fan the edges of the stack to separate the sheets, then reload the paper.

❑ If too many copies of a file are being printed, check the Copies setting in your printer driver as follows, and also check in your application.
For Windows, check the Copies setting on the Main window.
Mac OS X, check the Copies setting in the Print dialog.

Paper is improperly loaded

If you have loaded the paper too far into the product, the product cannot feed the paper correctly. Turn the product off and gently remove the paper. Then turn the product on and reload the paper correctly.

Paper is not ejected fully or is wrinkled

❑ If the paper does not eject fully, press the ⊘ button to eject the paper. If the paper is jammed inside the product, remove it by referring to the following section.
➡ "Paper Jams" on page 51

❑ If the paper is wrinkled when it comes out, it may be damp or too thin. Load a new stack of paper.

> *Note:*
> *Store any unused paper in its original packaging in a dry area.*

The Product Does Not Print

All lights are off

❑ Press the ⏻ button to make sure the product is on.

❑ Make sure that the power cord is securely plugged in.

❑ Make sure that your outlet works and is not controlled by a wall switch or timer.

Only the power light is on

❏ Turn off the product and computer. Make sure the product's interface cable is securely plugged in.

❏ If you are using the USB interface, make sure your cable meets the USB or Hi-Speed USB standards.

❏ If you are connecting the product to your computer via a USB hub, connect the product to the first-tier hub from your computer. If the printer driver is still not recognized on your computer, try to directly connect the product to your computer without the USB hub.

❏ If you are connecting the product to your computer via a USB hub, make sure the USB hub device is recognized by your computer.

❏ If you are trying to print a large image, your computer may not have enough memory. Try reducing the resolution of your image or printing the image at a smaller size. You may need to install more memory in your computer.

❏ Users of Windows can clear any stalled print jobs from the Windows Spooler.

❏ Uninstall the printer driver, then reinstall it.

Increasing the Print Speed (For Windows Only)

Print speed may be increased by selecting certain settings in the Extended Settings window when the printing speed is slow. Click the **Extended Settings** button on your printer driver's Maintenance window.
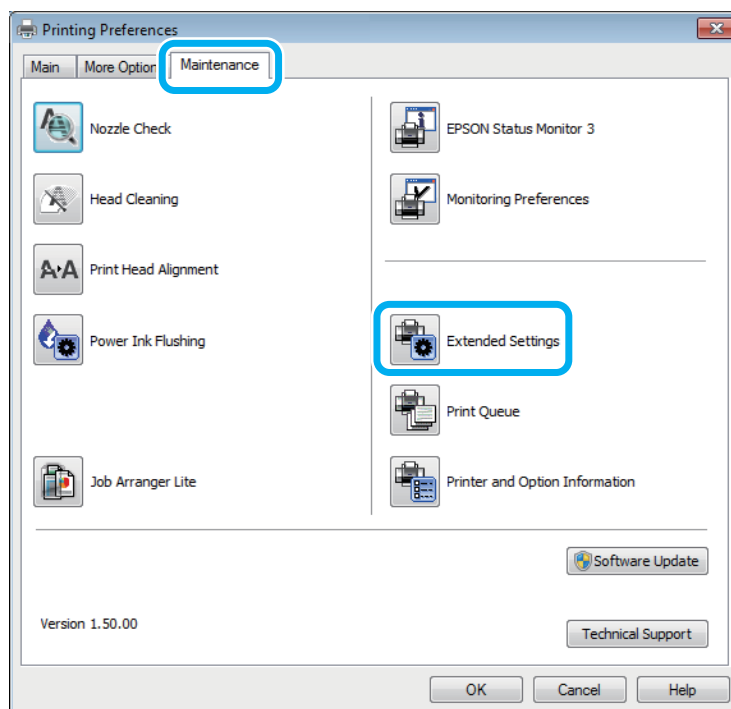

The following dialog box appears.

Select the following check boxes and print speed may be increased.

❏   High Speed Copies

❏   Always spool RAW datatype

❏   Page Rendering Mode

❏   Print as Bitmap

For more details on each item, see the online help.

Other Problem

Printing plain papers quietly

When plain paper is selected for the paper type and Standard (Windows) or Normal (Mac OS X) is selected as for quality in the printer driver, the product prints at high speed. Try choosing Quiet Mode for quieter operation which will reduce the print speed.

Troubleshooting for Printing

For Windows, select the Quiet Mode check box in the Main window of your printer driver.
For Mac OS X, select **On** from the Quiet Mode. To display the Quiet Mode, click through the following menus:
System Preferences, **Print & Scan** (for Mac OS X 10.7) or **Print & Fax** (for Mac OS X 10.6 or 10.5), your product
(in the Printers list box), **Options & Supplies**, and then **Driver**.
