Important Instructions

Safety Instructions

Read and follow these instructions to ensure safe use of this printer. Make sure you keep this manual for future reference. Also, be sure to follow all warnings and instructions marked on the printer.

❑ Use only the power cord supplied with the printer and do not use the cord with any other equipment. Use of other cords with this printer or the use of the supplied power cord with other equipment may result in fire or electric shock.

❑ Be sure your AC power cord meets the relevant local safety standard.

❑ Never disassemble, modify, or attempt to repair the power cord, plug, printer unit, scanner unit, or options by yourself, except as specifically explained in the printer's manuals.

❑ Unplug the printer and refer servicing to qualified service personnel under the following conditions:

The power cord or plug is damaged; liquid has entered the printer; the printer has been dropped or the casing damaged; the printer does not operate normally or exhibits a distinct change in performance. Do not adjust controls that are not covered by the operating instructions.

❑ Place the printer near a wall outlet where the plug can be easily unplugged.

❑ Do not place or store the printer outdoors, near excessive dirt or dust, water, heat sources, or in locations subject to shocks, vibrations, high temperature or humidity.

❑ Take care not to spill liquid on the printer and not to handle the printer with wet hands.

❑ Be careful not to touch any ink when you handle the ink tanks, ink tank caps, and opened ink bottles or ink bottle caps.

   ❑ If ink gets on your skin, wash the area thoroughly with soap and water.

   ❑ If ink gets into your eyes, flush them immediately with water. If discomfort or vision problems continue after a thorough flushing, see a doctor immediately.

   ❑ If ink gets into your mouth, see a doctor right away.

❑ Do not tilt or shake an ink bottle after removing its seal; this can cause leakage.

❑ Keep ink bottles and the ink tank unit out of the reach of children. Do not allow children to drink from or handle the ink bottles and ink bottle cap.

Printer Advisories and Warnings

Read and follow these instructions to avoid damaging the printer or your property. Make sure you keep this manual for future reference.

Advisories and Warnings for Setting Up/Using the Printer

❑ Do not block or cover the vents and openings in the printer.

❑ Use only the type of power source indicated on the printer's label.

❑ Avoid using outlets on the same circuit as photocopiers or air control systems that regularly switch on and off.

❑ Avoid electrical outlets controlled by wall switches or automatic timers.

Important Instructions

❏ Keep the entire computer system away from potential sources of electromagnetic interference, such as loudspeakers or the base units of cordless telephones.

❏ The power-supply cords should be placed to avoid abrasions, cuts, fraying, crimping, and kinking. Do not place objects on top of the power-supply cords and do not allow the power-supply cords to be stepped on or run over. Be particularly careful to keep all the power-supply cords straight at the ends and the points where they enter and leave the transformer.

❏ If you use an extension cord with the printer, make sure that the total ampere rating of the devices plugged into the extension cord does not exceed the cord's ampere rating. Also, make sure that the total ampere rating of all devices plugged into the wall outlet does not exceed the wall outlet's ampere rating.

❏ If you plan to use the printer in Germany, the building installation must be protected by a 10 or 16 amp circuit breaker to provide adequate short-circuit protection and over-current protection for the printer.

❏ When connecting the printer to a computer or other device with a cable, ensure the correct orientation of the connectors. Each connector has only one correct orientation. Inserting a connector in the wrong orientation may damage both devices connected by the cable.

❏ Place the printer on a flat, stable surface that extends beyond the base of the printer in all directions. The printer will not operate properly if it is tilted at an angle.

❏ When storing or transporting the printer, avoid tilting it, placing it vertically, or turning it upside down; otherwise ink may leak.

❏ Allow space above the printer so that you can fully raise the document cover.

❏ Leave enough space in front of the printer for the paper to be fully ejected.

❏ Avoid places subject to rapid changes in temperature and humidity. Also, keep the printer away from direct sunlight, strong light, or heat sources.

❏ Do not insert objects through the slots in the printer.

❏ Do not put your hand inside the printer during printing.

❏ Do not touch the white flat cable and ink tubes inside the printer.

❏ Do not use aerosol products that contain flammable gases inside or around the printer. Doing so may cause fire.

❏ Do not move the print head by hand; otherwise, you may damage the printer.

❏ Be careful not to trap your fingers when closing the scanner unit.

❏ Do not press too hard on the scanner glass when placing the originals.

❏ If any of the ink tanks are not filled up to the lower line, refill the ink soon. Continued use of the printer when the ink level is below the lower line on the tanks could damage the printer.

❏ Always turn the printer off using the ⏻ button. Do not unplug the printer or turn off the power at the outlet until the ⏻ light stops flashing.

❏ Before transporting the printer, make sure that the print head is in the home (far right) position.

❏ If you are not going to use the printer for a long period, be sure to unplug the power cord from the electrical outlet.

Paper Handling Precautions

❏ Read the instruction sheets supplied with the paper.

❏ Fan and align the edges of the paper before loading. Do not fan or curl photo paper. Doing so may damage the printable side.
❏ If the paper is curled, flatten it or curl it slightly in the opposite direction before loading. Printing on curled paper may cause paper jams and smears on the printout.
❏ Do not use paper that is wavy, torn, cut, folded, damp, too thick, too thin, or paper that has stickers stuck to it. Using these types of paper causes paper jams and smears on the printout.

❏ Fan and align the edges of the envelopes before loading. When the stacked envelopes are puffed up with air, press them down to flatten them before loading.
❏ Do not use envelopes that are curled or folded. Using these envelopes causes paper jams and smears on the printout.

❏ Do not use envelopes with adhesive surfaces on the flaps or window envelopes.

❏ Avoid using envelopes that are too thin, as they may curl during printing.

PhotoEnhance produces sharper images and more vivid colors by automatically adjusting the contrast, saturation, and brightness of the original image data.

Note:
❏ *These adjustments are not applied to the original data.*

❏ *PhotoEnhance adjusts the color by analyzing the location of the subject. Therefore, if you have changed the location of the subject by reducing, enlarging, cropping, or rotating the image, the color may change unexpectedly. Selecting the borderless setting also changes the location of the subject resulting in changes in color. If the image is out of focus, the tone may be unnatural. If the color is changed or becomes unnatural, print in a mode other than PhotoEnhance.*

Windows

Select the method of color correction from **Color Correction** on the **More Options** tab.

If you select **Automatic**, the colors are automatically adjusted to match the paper type and print quality settings. If you select **Custom** and click **Advanced**, you can make your own settings.

Mac OS X

Refilling Ink

Checking the Ink Levels - Tank

To confirm the actual ink remaining, visually check the ink levels in all of the printer's tanks.

> **Important:**
>
> *If any of the ink tanks are not filled up to the lower line, fill them to the upper line on the ink tank. Continued use of the printer when the ink level is below the lower line on the tanks could damage the printer.*
Ink Bottle Codes

Epson recommends the use of genuine Epson ink bottles. Epson cannot guarantee the quality or reliability of non-genuine ink. The use of non-genuine ink may cause damage that is not covered by Epson's warranties, and under certain circumstances, may cause erratic printer behavior.

Other products not manufactured by Epson may cause damage that is not covered by Epson's warranties, and under certain circumstances, may cause erratic printer behavior.

The following are the codes for genuine Epson ink bottles.

BK (Black)	C (Cyan)	M (Magenta)	Y (Yellow)
664	664	664	664

> **Important:**

Ink Bottle Handling Precautions

Read the following instructions before refilling ink.

Handling precautions

❏ Use ink bottles with the correct part code for this printer.

❏ This printer requires careful handling of ink. Ink may splatter when the ink tanks are filled or refilled with ink. If ink gets on your clothes or belongings, it may not come off.

❏ Store ink bottles at normal room temperature and keep them away from direct sunlight.

❏ Epson recommends using the ink bottle before the date printed on the package.

❏ Store the ink bottles in the same environment as the printer.

❏ When storing or transporting an ink bottle after removing its seal, do not tilt the bottle and do not subject it to impacts or temperature changes. Otherwise, ink may leak even if the cap on the ink bottle is tightened securely. Be sure to keep the ink bottle upright when tightening the cap, and take measures to prevent ink from leaking when you transport the bottle.

❏ After bringing an ink bottle inside from a cold storage site, allow it to warm up at room temperature for at least three hours before using it.

❏ Do not open the ink bottle package until you are ready to fill the ink tank. The ink bottle is vacuum packed to maintain its reliability. If you leave an ink bottle unpacked for a long time before using it, normal printing may not be possible.

❏ If any of the ink tanks are not filled up to the lower line, refill the ink soon. Continued use of the printer when the ink level is below the lower line on the tanks could damage the printer.

❏ Although the ink bottles may contain recycled materials, this does not affect printer function or performance.

❏ Specifications and appearance of the ink bottle are subject to change without prior notice for improvement.

❏ Quoted yields may vary depending on the images that you are printing, the paper type that you are using, the frequency of your prints and environmental conditions such as temperature.

Ink consumption

❏ To maintain optimum print head performance, some ink is consumed from all ink tanks not only during printing but also during maintenance operation such as print head cleaning.

❏ When printing in monochrome or grayscale, color inks instead of black ink may be used depending on the paper type or print quality settings. This is because a mixture of color inks is used to create black.

❏ The ink in the ink bottles supplied with your printer is partly used during initial setup. In order to produce high quality printouts, the print head in your printer will be fully charged with ink. This one-off process consumes a quantity of ink and therefore these bottles may print fewer pages compared to subsequent ink bottles.

Refilling the Ink Tanks

Ink can be refilled at any time.

1. Unhook the ink tank unit from the printer and lay it down.
Refilling Ink

> ❗ *Important:*
>
> *Do not pull the tubes.*

2. Open the ink tank unit cover, and then remove the cap of the ink tank.
> ❗ *Important:*
>
> ❏ *Be careful not to spill any ink.*
>
> ❏ *Make sure that the color of the ink tank matches the ink color that you want to refill.*
3. Snap off the top of the cap, remove the cap of the ink bottle, remove the seal from the bottle, and then install the cap.
Refilling Ink

> ❗ *Important:*
>
> *Close the ink bottle cap tightly; otherwise ink may leak.*
Note:
Do not dispose of the top of the cap. If any ink remains in the ink bottle after refilling the tank, use the top of the cap to seal the ink bottle cap.

4. Refill the ink tank with the correct colored ink up to the upper line on the ink tank.
Note:
If any ink remains in the ink bottle after filling the ink tank up to the upper line, install the cap securely and store the ink bottle upright for later use.
Refilling Ink

5. Close the cap onto the ink tank securely.
6. Close the ink tank unit cover.
7. Hook the ink tank unit onto the printer.

Improving Print and Scan Quality

Checking and Cleaning the Print Head

If the nozzles are clogged, the printouts become faint, there is visible banding, or unexpected colors appear. When print quality has declined, use the nozzle check feature and check if the nozzles are clogged. If the nozzles are clogged, clean the print head.

> **!** *Important:*
>
> *Do not open the scanner unit or turn off the printer during head cleaning. If the head cleaning is incomplete, you may not be able to print.*

Note:

❏ *Because print head cleaning uses some ink, clean the print head only if quality declines.*

❏ *When ink is low, you may not be able to clean the print head. Prepare a new ink bottle.*

❏ *If print quality has not improved after repeating nozzle check and head cleaning three times, wait for at least 12 hours without printing, and then run the nozzle check again and repeat the head cleaning if necessary. We recommend to turn off the printer. If print quality has still not improved, contact Epson support.*

❏ *To prevent the print head from drying out, do not unplug the printer while the power is on.*

❏ *To keep the print head operating at its best, we recommend printing a few pages on a regular basis.*

❏ There are broken lines or missing segments: The print head nozzles may be clogged. Go to the next step.
Note:
The test pattern may vary by model.

5. Hold the ⊘ button down for three seconds until the power light starts flashing.

Checking the Printer Status

Checking the Error Indicators on the Printer

When an error occurs, the light turns on or flashes. Details of the error are displayed on the computer screen.

■: On

■ : Flashing slowly

■ : Flashing fast

Light	Situation	Solutions
	No paper is loaded or more than one sheet has been fed at a time.	Load paper and press the ⬙ or ⬙ button.
	A paper jam has occurred.	Remove the paper and press the ⬙ or ⬙ button.
	Initial ink charging may not be complete.	See the *Start Here* poster to complete initial ink charging.
	The ▯ light and ◖ light flash alternately. An ink pad is nearing or at the end of its service life.	The ink pads need to be replaced. Contact Epson or an authorised Epson service provider to replace the ink pad*. It is not a user-serviceable part. When a message saying that you can continue printing is displayed on the computer, press the ⬙ or ⬙ button to continue printing. The lights stop flashing for the time being, however, they will continue to flash at regular intervals until the ink pad is replaced.
	A printer error has occurred.	Open the scanner unit and remove any paper or protective material inside the printer. Turn the power off and on again.
	The printer has started in recovery mode because the firmware update failed.	Follow the steps below to try to update the firmware again. 1. Connect the computer and the printer with a USB cable. 2. Visit your local Epson website for further instructions.

* In some print cycles a very small amount of surplus ink may be collected in the ink pad. To prevent ink leakage from the pad, the printer is designed to stop printing when the pad has reached its limit. Whether and how often

this is required will vary according to the number of pages you print, the type of material that you print and the number of cleaning cycles that the printer performs. The need for replacement of the pad does not mean that your printer has ceased to operate in accordance with its specifications. The printer will advise you when the pad requires replacing and this can only be performed by an authorised Epson Service provider. The Epson warranty does not cover the cost of this replacement.

Paper Does Not Feed Correctly

Check the following if the paper jams, paper is fed at a slant, several sheets of paper are fed at a time, no paper is fed, or paper is ejected.

❑ Place the printer on a flat surface and operate in the recommended environmental conditions.

❑ Use paper supported by this printer.

❑ Follow the paper handling precautions.

❑ Load paper in the correct direction, and slide the edge guide against the edge of the paper.

❑ Do not load more than the maximum number of sheets specified for the paper. For plain paper, do not load above the line indicated by the triangle symbol on the edge guide.

❑ When a paper out error occurs although paper is loaded in the printer, reload paper against the right edge of the rear paper feed.

❑ Load one sheet of paper at a time when loading multiple sheets of paper.

❑ When several sheets of paper are fed at a time during manual 2-sided printing, remove any paper which is loaded in the paper source before you reload the paper.

❑ Printing may have been paused for a certain length of time which causes the printer to eject the paper.

Printer Does Not Print

Check the following if the printer does not operate or prints nothing.

❑ Install the printer driver.

❑ To print photos easily, install Epson Easy Photo Print.

❏ Connect the USB cord securely to the printer and the computer.

❏ If you are using a USB hub, try to connect the printer directly to the computer.

❏ If you are printing a large data size image, the computer may run out of memory. Print the image at a lower resolution or a smaller size.

❏ In Windows, click **Print Queue** on the printer driver's **Maintenance** tab, and then check the following.

  ❏ Check if there are any paused print jobs.

    Cancel printing if necessary.

  ❏ Make sure the printer is not offline or pending.

    If the printer is offline or pending, clear the offline or pending setting from the **Printer** menu.

  ❏ Make sure the printer is selected as the default printer from the **Printer** menu (there should be a check mark on the menu item).

    If the printer is not selected as the default printer, set it as the default printer.

❏ In Mac OS X, make sure the printer status is not **Pause**.

  Select **System Preferences** from the menu > **Printers & Scanners** (or **Print & Scan**, **Print & Fax**), and then double-click the printer. If the printer is paused, click **Resume** (or **Resume Printer**).

Printout Problems

Print Quality Is Poor

Check the following if the print quality is poor due to blurry prints, banding, missing colors, faded colors, misalignment, and mosaic-like patterns in the prints.

❏ Make sure the initial ink charging is complete.

❏ Check the ink tank. If the tank is empty, refill the ink immediately and clean the print head.

❏ Run the nozzle check and then clean the print head if any of the print head nozzles are clogged.

❏ If you have not used the printer for a long time, use the Power Ink Flushing utility of the printer driver.

❏ Align the print head.

❏ If misalignment appears at intervals of 2.5 cm, align the print head.

❏ Use paper supported by this printer.

❏ Do not print on paper that is damp, damaged, or too old.

❏ If the paper is curled or the envelope is puffed up, flatten it.

❏ When printing images or photos, print using high-resolution data. Images on websites are often low resolution although they look good enough on the display, and so print quality may decline.

❏ Select the appropriate paper type setting in the printer driver for the type of paper loaded in the printer.

❏ Print using a high quality setting in the printer driver.

❏ When images or photos are printed in unexpected colors, adjust the color and then print again. The automatic color correction feature uses the standard correction mode in **PhotoEnhance**. Try another correction mode in **PhotoEnhance** by selecting an option other than **Auto Correct** as the **Scene Correction** setting. If the problem continues, use any other color correction feature other than **PhotoEnhance**.

❏ Disable the bidirectional (or high speed) setting. When this setting is enabled, the print head prints while moving in both directions, and vertical lines may be misaligned. If you disable this feature, printing may slow down.

  ❏ Windows

    Clear **High Speed** on the printer driver's **More Options** tab.

  ❏ Mac OS X

    Select **System Preferences** from the menu > **Printers & Scanners** (or **Print & Scan**, **Print & Fax**), and then select the printer. Click **Options & Supplies** > **Options** (or **Driver**). Select **Off** as the **High Speed Printing** setting.

❏ Do not stack the paper immediately after printing.

❏ Dry the printouts completely before filing or displaying them. When drying the printouts, avoid direct sun light, do not use a dryer, and do not touch the printed side of paper.

❏ Try to use genuine Epson ink bottles. This product is designed to adjust colors based on the use of genuine Epson ink bottles. The use of non-genuine ink bottles may cause print quality to decline.

❏ Use ink bottles with the correct part code for this printer.

❏ Epson recommends using the ink bottle before the date printed on the package.

❏ When printing images or photos, Epson recommends using genuine Epson paper rather than plain paper. Print on the printable side of the genuine Epson paper.

Other Printing Problems

Printing Is Too Slow

❑ Close any unnecessary applications.

❑ Lower the quality setting on the printer driver. High quality printing slows down the printing speed.

❏ Enable the bidirectional (or high speed) setting. When this setting is enabled, the print head prints while moving in both directions, and the printing speed increases.

Printing Slows Down Dramatically During Continuous Printing

Printing slows down to prevent the printer mechanism from overheating and being damaged. However, you can continue printing.

To return to normal printing speed, leave the printer idle for at least 30 minutes. Printing speed does not return to normal if the power is off.

Transporting the Printer

When you need to transport the printer to move or for repairs, follow the steps below to pack the printer.

> **❗ Important:**
> ❏ *When storing or transporting the printer, avoid tilting it, placing it vertically, or turning it upside down; otherwise ink may leak.*
>
> ❏ *When storing or transporting an ink bottle after removing its seal, do not tilt the bottle and do not subject it to impacts or temperature changes. Otherwise, ink may leak even if the cap on the ink bottle is tightened securely. Be sure to keep the ink bottle upright when tightening the cap, and take measures to prevent ink from leaking when you transport the bottle.*
>
> ❏ *Do not put opened ink bottles in the box with printer.*

1. Turn off the printer by pressing the ⏻ button.

2. Make sure the power light turns off, and then unplug the power cord.

> ❗ *Important:*
>
> *Unplug the power cord when the power light is off. Otherwise, the print head does not return to the home position causing the ink to dry, and printing may become impossible.*

3. Disconnect all cables such as the power cord and USB cable.

4. Remove all of the paper from the printer.

5. Make sure there are no originals on the printer.

6. Open the scanner unit with the document cover closed. Secure the print head to the case with tape.
7. Close the scanner unit.
Appendix

8. Prepare to pack the printer as shown below.
9. Unhook the ink tank unit from the printer and lay it down, and then make sure to install the cap onto the ink tank securely.
10. Hook the ink tank unit onto the printer.

11. Pack the printer in its box using the protective materials to prevent the ink tank from being unhooked.

When you use the printer again, make sure you remove the tape securing the print head. If print quality has declined the next time you print, clean and align the print head.
