

Guidance on safe handling of UV inks for SureColor V1000

Introduction

This document provides general guidance on the safe handling and use of UV inks in printing operations. Although UV inks are formulated for high-quality printing performance, it is essential to follow best practices to ensure a safe and healthy working environment.

Safe handling practices/cleaning and maintenance

Detailed information regarding the composition and handling of these inks can be found in their respective Safety Data Sheets (SDS) available on this website – [Safety Data Sheets Repository | Epson Europe](#). Operators are encouraged to review the SDS before use for specific safety instructions and recommendations.

To minimise exposure and maintain a clean working environment, the following safety measures should be observed:

Avoid direct skin contact: UV inks may cause irritation with prolonged exposure.

Avoid handling ink with bare hands.

Use appropriate Personal Protective Equipment (PPE): Operators should wear protective clothing, gloves and safety glasses when handling ink to minimise the risk of exposure.

Handwashing: Always wash hands thoroughly with soap and water after handling UV ink, even if gloves were worn.

Cleaning and maintenance: When cleaning UV ink, operators should wear plastic or rubber gloves and avoid any direct contact with residual ink.

Proper ventilation: Ensure that work areas are adequately ventilated to prevent the accumulation of ink fumes.
